

The EBL (Experimental Bioinformatics Laboratory), a part of the Joint Research Programme between the Institut of Research in Biomedicine and the Barcelona Supercomputing Center, is seeking two postdoctoral scientists to work on experimental projects devoted to gene regulation and chromatin structure.

**Requirements:** PhD in molecular biology, biochemistry or related sciences, with a strong background in yeast biology. Experience in genomics-based techniques for the analysis of chromatin structure and dynamics is essential and knowledge of standard bioinformatics techniques will be a plus.

**We can offer:** A one or two year contract with standard Spanish postdoctoral salaries. Excellent laboratory and Institute set up and new and highly active scientific and technological environment.

**Candidates:** Should send their C.V to the attention of Prof. Modesto Orozco, Programme Director ([montse.soler@irbbarcelona.org](mailto:montse.soler@irbbarcelona.org))
