BIOMÈDICA

**Barcelona
Supercomputing
Center**

Centro Nacional de Supercomputación

PhD position available at the Experimental Bioinformatics Laboratory (EBL), a part of the Joint Research Programme between the Institute of Research in Biomedicine and the Barcelona Supercomputing Center.

With the aim to provide a deeper understanding of basic mechanisms that control gene expression, the research activity will involve the development and implementation of experimental protocols and approaches for the analysis of regulatory regions in eukaryotic genomes. The centers and research groups involved in the project provide an ideal interdisciplinary scientific environment for training in cutting-edge research in Molecular Biology.

We seek graduate students with a strong background in biology. Although not a requirement, previous experience in recombinant DNA and protein techniques would be highly appreciated.

Interested candidates are encouraged to send their CV and student transcript to:
