POSTDOCTORAL FELLOW AT IRB BARCELONA

POSTDOCTORAL POSITION IN THE MICROTUBULE ORGANIZATION LABORATORY (Dr. Jens Lüders)

We are looking for a highly motivated postdoctoral researcher with a solid background in molecular biology to study the structure, function and regulation of the human γ -tubulin ring complex (γ TuRC). Experience in cell culture techniques as well as biochemical approaches will be a plus.

Our lab's interest is the identification and characterization of microtubule nucleation pathways to understand how cells assemble microtubule arrays. We are particularly interested in mitotic spindle assembly but also study the formation of other specialized microtubule arrays during cell differentiation.

Candidates should send an email with CV and the names of two referees to Dr. Jens Lüders: jens.luders@irbbarcelona.org
