Image creation and photographic edition with Adobe Photoshop and Adobe Illustrator

This activity will allow students:

- To become familiar with the user interface of an image creating and editing software.
- To create texts, simple presentations and diagrams from scratch and to illustrate complex concepts and processes.
- To create and edit graphic content independently, seeking to optimize them in terms of clarity and quality.
- To learn basic techniques of photographic editing, such as controlling size, weight, color, brightness and contrast.
- To learn advanced photographic composition techniques, such as selective editions, repeated actions in large series of images, work with media from other software, etc.
- To learn how to show or print images efficiently, maintaining the maximum level of quality and an optimal work flow.
- To create and edit scientific posters and presentations.
- To design with aesthetic criteria when structuring information.
- To work with text frames and graphics.
- To export posters or presentations to .jpg and .pdf to be used in screen presentations or printed material.

Date and Time Tuesday 27 April from 15:00 to 17:00 and
Wednesday 28 April 2021 from 9:30 to 11:30

Place Online (Zoom)

The group will comprise **15 participants**, who will attend two 2-h sessions.

Registration: Fill in the registration form [here](#) before 21 April.

A confirmation email will be sent to all participants. Participants will receive access details prior to the start of the workshop.
